When I used the Extract Data option from the Help menu to view the Banner extracted data, a window appears and then disappears. How can I get the Extract Data functionality to work in Banner 7?

This happens when you do not have the Banner servers as Trusted Sites in Internet Explorer.

Exit out of Banner and close all windows.

Open Internet Explorer and select Internet Options from the Tools window.

Click on the Security tab. Click on the Trusted Sites icon. Click on the Sites button.

Uncheck the "Require server verification" checkbox. Add these two web sites to this zone:

banweb.rhodes.edu
inb7.rhodes.edu

Click OK and then OK again. Now, when you load Banner, you will be able to use the Extract Data functionality.
